## [ Coderobotics - Hook for Enterprises ]

HR Management is developed in Core PHP. For installing it on your hosting, please follow the below instructions.

1. Please copy and paste source code on your root folder (public\_html/hrmgmt)
2. Create db and restore mysql file on Phpmyadmin, provide all privileges to the db user
3. Go to public\_html/hrmgmt/protected/setting/globals.php
4. Change your DB details - public\_html/hrmgmt/protected/setting/globals.php
5. Run

**Note.** For seamless our script performance, compatibility at a low price, we highly recommend [Hostinger](#)—reliable, fast, and built for excellence!
